			重庆大学软件测试理论与方法课程试卷						
			三人人子 れ 川 内 内 左 し つ み は か 在 内 を C B 卷						
姓名_			2015—2016 学年 第二学期						
数			开课学院: <u>软件学院</u> 课程号: <u>09009720</u> 考试日期: <u>2016.06.16</u>						
			考试方式: ○开卷 ⊙闭卷 ○其他 考试时间: 120 分钟						
		<u></u>	题号一二三四五六七八九十总分						
华	.to	密	得分						
	七位在作歌		考试提示						
1.严禁随身携带通讯工具等电子设备参加考试; 2.考试作弊,特									
	NIT.	Part 1: Multiple Choice Questions; Circle the							
班	14年十二年	封	 Software Testing is () A. Installing software and see if it works. B. The only process that improves the quality of the software. C. Making sure all the defects in a software system are found.						
幸业、	本国人	2) White box testing is called White box because ()							
			 A. You need the permission of your manager. B. The tests need to be documented. C. The tester needs no programming knowledge. 						
华紹		线	 D. The tester needs programming knowledge. 3) Dynamic Testing is () A. Part of Unit Testing. B. Testing the product together with the customer. C. Testing software without executing the software. 						
			D. The same as Validating the software. 4) Black box testing ()						

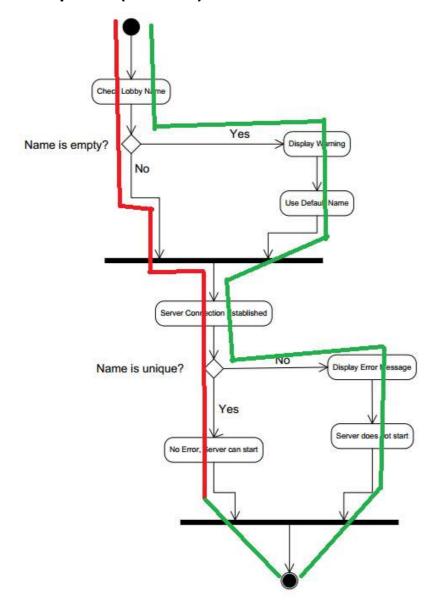

B. Is the same as Static Code Analysis C. Is testing the boundaries of invalid ranges. D. Aims to test the software's functionality. 5) The execution of Dynamic Testing methods () A. Is planned in the System Test plan. B. Can be done without computers. C. Cannot be done without computers. D. Is executed, while the code is still being changed. 6) Testing whether you are able to gain access to an application by using SQL Injection, is called () A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()	C				
D. Aims to test the software's functionality. 5) The execution of Dynamic Testing methods () A. Is planned in the System Test plan. B. Can be done without computers. C. Cannot be done without computers. D. Is executed, while the code is still being changed. 6) Testing whether you are able to gain access to an application by using SQL Injection, is called () A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()	C				
A. Is planned in the System Test plan. B. Can be done without computers. C. Cannot be done without computers. D. Is executed, while the code is still being changed. 6) Testing whether you are able to gain access to an application by using SQL Injection, is called () A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()	且短く・・こと				
B. Can be done without computers. C. Cannot be done without computers. D. Is executed, while the code is still being changed. 6) Testing whether you are able to gain access to an application by using SQL Injection, is called () A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()	页 く・・ ここ				
C. Cannot be done without computers. D. Is executed, while the code is still being changed. 6) Testing whether you are able to gain access to an application by using SQL Injection, is called () A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()	页 く・・ ここ				
6) Testing whether you are able to gain access to an application by using SQL Injection, is called () A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()	C Z				
6) Testing whether you are able to gain access to an application by using SQL Injection, is called () A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()	C Z				
A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()					
A. SQL Testing. B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique ()					
B. Stress Testing. C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique () 均	í				
C. Security Testing. D. Acceptance Testing. 7) Boundary Value Analysis is a test technique () 故	í				
7) Boundary Value Analysis is a test technique ()	Į.				
7) Boundary Value Analysis is a test technique ()					
.XE	9				
A. That is needed to perform Integration Testing	j j				
B. That is used during Static Code Analysis.					
C. That can only be used during White Box tests.					
D. That tests the boundary values of valid and invalid input ranges. 8) A Virtual Simulation is ()	Į				
A Virtual Simulation is ()					
A. Is a simulated test environment which runs in real time. B. Is a simulated test environment in which time can be controlled.					
B. Is a simulated test environment in which time can be controlled.C. Is a simulated test environment which is based on a sequence of events, instead of time.	2				
events, instead of time.	>				
D. The same as a Test Stub.	`				
9) The Cost Effective-Based Test Prioritization Strategy involves ()	L				
A. Asking the customer how important the tests are in his opinion. B. Writing a Test Prioritization Management plan.					
B. Writing a Test Prioritization Management plan.					
C. Analyzing how dangerous the tests would be.	.1				
D. Analyzing how expensive the tests would be.					
10) A way to do Performance Testing is ()					
A. Overclocking the test PC's.					
B. Measuring response times of selected use cases.C. Observing how the system behaves during large file copying.					
D. Doing the test extremely fast.					

16) Static Code Analysis aims to prevent mistakes, not to find them.

Part 2: TRUE-FALSE Questions; Check the correct answer.

. u	11 2. TROE TALOE QUOUNTIE, OHOUR THE CONTOUT ANOMOR	i	() TRUE () FALOE
(20	Points)	4-7	()TRUE ()FALSE
1)	The best software tester is the same person who also wrote the code for the software. ()TRUE ()FALSE) Static Code Analysis is checking whether the code is programmed correctly against the coding guidelines. ()TRUE ()FALSE
2)	Debugging software is the same as Black Box Testing. ()TRUE ()FALSE) Record & Playback tools are used for performing Static Testing on requirements. ()TRUE ()FALSE) Test Scenarios are written as guides for testers to test system functions.
3)	Static Code Analysis is done during the Customer Acceptance Test. ()TRUE ()FALSE) Unit Test Frameworks are tools which help the tester to perform Black Box
,	A system that aims to duplicate the inner workings of the system, while hosted on another system, is called an Emulator. ()TRUE ()FALSE	20)	tests. ()TRUE ()FALSE
	Testing whether a system can withstand a Denial-Of-Service (DOS) attack is		art 3: Review the following requirements; check <u>all</u> that
	a form of Security Testing. ()TRUE ()FALSE The SQL Injection test technique is used when performing Static Testing. ()TRUE ()FALSE	ар 1)	The race game shall have different cars, tracks and gadgets.
7)	Fuzz Testing involves randomly clicking around. ()TRUE ()FALSE		 Not Specific Not Measureable Not Achievable
	Cause-Effect Graphing is a Black Box Test technique. ()TRUE ()FALSE		 () Not Achievable () Multiple requirements () No problem
	Semantic Errors are mistakes in the software, which result in wrong system behavior. ()TRUE ()FALSE	2)	The Student Management application should be able to store all the grades.
10)	Test Reports should contain statement(s) about the reached level of quality. ()TRUE ()FALSE		<pre>() Not Specific () Not Relevant () Not Measureable () Not Traceable</pre>
-	Multiple requirements combined in one requirement will make the tests more efficient. ()TRUE ()FALSE		() Not Achievable () Multiple requirements
12)	A good requirement is always Relevant. ()TRUE ()FALSE	3)	() No problem The application may only be installed on the server by the database
13)	With Usability Testing a tester observes the behavior of the system when large amounts of data are transferred to/from the system.		administrator. () Not Specific () Not Relevant
14)	()TRUE ()FALSE A Stress Test is a Non-Functional Test.		() Not Measureable() Not Traceable() Not Achievable
15)	Peer Reviews are not considered to be part of the Testing Process. ()TRUE ()FALSE		() Multiple requirements() No problem

Part 4: Define the number of necessary test runs, to test all possible paths. (9 Points)

How many test *runs* are necessary to test all the possible paths in the software? (2) No combination possible

Part 5: Connect Test Techniques with the Types. (10 Points)
