Software Testing

Test Data

by   J. Janvier (Jay/文宇)

Test Data

Set of data which is needed to perform tests.

Often organizing good test data is underestimated
- Testers just use old (outdated) data,
- Copy production data (unknow status),
- Make up (too) simple test data,
- Plan no time for defining and selecting test data.

Well defined and selected test data helps to:
- increase the software quality,
- speeds up the testing process,
- get reliable test results.
